What's new in Capture One for iPad? - 20th April, 2023

Question	Answer
I believe that iPad screens cannot be calibrated. So, is it worth to do color editing on them if you might have to adjust it later on the calibrated screen?	Hi Olaf, yeah, the iPad screen can't be calibrated, that's true, even though the colors of iPad match the apple screens a lot.
Are there variants?	Yes! Long tap on an image in the browser
Will there be a healing brush?	Hi Daniel, we're not actually aware of that yet, but we'd appreciate you sharing this idea on our improve Capture One page: https://support.captureone.com/hc/en-us/community/topics/
Hi, Can you use the ipad to mirror a session on capture one pro running on a separate mac?	Hi Jordan, Capture One for desktop and the one for iPad are separate apps, so yeah, mirroring is not possible, but check what David is saying about Capture One Live. Might be an option for you.
And is it right, that Live on Ipad comes with no restrictions (e. g. 1 month shown for the client instead of 24 hours)?	For a limited time, the Unlimited plan is available for free, providing access to a range of features: Unlimited Live Sessions 1 month maximum uptime Reviewer management Should you have further questions, you can check our FAQ section here: https://support.captureone.com/hc/en-us/articles/10596554330141-Capture-One-Live-for-iPad-FAQ Thanks Helen, that's a nice offer to try the ipad version. You will also be able to try out Capture One for iPad with a 7-day free trial ;) i already dit it for one month:)
Can I shoot to iPad and camera card at the same time?	Yes. Check in the camera settings menu
Can you share details of those routers please	Hey Jon. Sure. I will find the link https://www.netgear.com/uk/home/mobile-wifi/hotspots/mr6450 https://www.tp-link.com/uk/home-networking/mifi/
Hi David, If I export a full resolution Raw file as a jpeg, then email it to myself and save the image in the Photos app, it's fine, the size is correct. If I export the same jpeg as a web optimised 2048 px image, email it to myself then save it in the Photos app, it shows as a 1080 x 720 px (270k) which is the Instagram size. If I now export the same image yet again as a web optimised 2048 px image then share it via the 'Save to Files option' it saves as a 2048 px (2.1 meg)image the way it should export. Any ideas David?	Hi Michael, we'd love to look into that behavior for you. Since David might not have time to discuss such issues, we encourage you to reach out to support sharing a sample of your file for testing and further investigation: support.captureone.com
When looking through the photos, is there a way to use the wheel to move from photo to photo? If so, it would be fantastic to spin the wheel to move through a large quantity of photos!	Hi Dan! Good point, please share it on our new Improve Capture One for Feature requests: https://support.captureone.com/hc/en-us/community/topics/6431248131613-Improve-Capture-One?sort_by=votes
I think the default should be clockwise for +tive and counter-clockwise -tive 	Hi Hans, if you're talking about the wheel for adjustments, you can set that in settings according to your taste. Since the tastes are different, just use that option to let it fit your needs. Thank you!
Is "adjustable" vignetting included like in caputre one pro.	Sure! You can add custom vignetting in the Desktop version: https://support.captureone.com/hc/en-us/articles/360002605837-Applying-a-vignette Ok, would be great. Time ago I tried, but could not move the center point, wast fixed around the center. But if this is working than I retry it. :-)
Any idea when curves, layers, masks will be offered?	Hi Gregory! Although we cannot tell much in terms of future features for Capture One, feel free to share your feedback on our Improve Capture One page: https://support.captureone.com/hc/en-us/community/topics/6431248131613-Improve-Capture-One?sort_by=votes Thanks.
Is there anyway to export pics from C1 Pro desktop to the ipad app and vice versa? Do they /can they share a common cloud?	Hi James, yes, check this guide on how to use Cloud trasfer: https://support.captureone.com/hc/en-us/articles/5371094620189-How-to-use-Cloud-Transfer Hi James! Currently the transfer of images including adjustments only work from iPad to desktop and not the other way around. However, this is hopefully just a matter of time. You can read up on the topic here: https://support.captureone.com/hc/en-us/articles/5371094620189-How-to-use-Cloud-Transfer

Question	Answer
Can the size of the images in the filmstrip be changed?	Not currently, Dan.
Hi David, We have spoken recently regarding the version 2 firmware upgrade to my Sony A7M4 and it's impact on tethering wirelessly using WiFi Direct. I submitted a support request as you suggested, have you received any feedback on this problem Michael	Hi Michael, we saw your ticket - there seems to be an issue on the Sony side, so not a Capture One issue per se. Please head over to Sony support: https://www.sony.com/electronics/support It would be appreciated if your support team would talk to Sony support about this problem.
i am having problems importing images from my I pad Pro to my windows desktop. I actually fired a portable hard drive trying to import photos. Is there a way to do this action easily?	Hi James, you might try using Cloud: https://support.captureone.com/hc/en-us/articles/5371094620189-How-to-use-Cloud-Transfer If there are still some issues, reach out to us at support.captureone.com and we'll help you further. Thanks
Can you talk about wireless capture from camera to iPad	If David doesn't delve deeper into this, you can start with this article: https://support.captureone.com/hc/en-us/articles/6791033649437-Wireless-tethering-setup Still, well worth a separate webinar maybe. Can I get only JPGs to import wirelessly when shooting RAW+JPG to keep the speed up for client preview?
