

Release notes for Capture One PRO 3.7.9 for Mac

June 2008

What's new in Capture One PRO 3.7.9

Camera support and bug fixes in particular for Leopard.

Solved issues

- Occasional black lines running Leopard (10.5.x)
- Load problem for certain Nikon D3, D300 files
- Canon 1DMkIII 4 pixel offset
- Highlight Tone Priority for Canon 1DMkIII, Canon 40D
- Default capture format is now IIQ Large.

Known issues

- Tethered capture with a number of Canon cameras is not supported.
- Canon SRAW is not supported.
- Processing to scale factors at 120-170% may present artifacts in sub pixel details
- When renaming images with memory card importer, file names are truncated to 4 digits from left to right
- Capture One will crash and fail to capture images tethered when the disk with the capture folder is full
- Renaming captures to an empty string (" ") can make some images unreadable afterwards
- When using a CMYK profile and outputting to JPEG format meta data is discarded.
- Monitor profile not applied correctly to separate thumbnail window when displayed on an individual monitor
- Users running OS X 10.4.6 or older on Intel based Macs might experience difficulties capturing tethered with Canon EOS cameras with USB interfaces. This issue is solved when the OS X is upgraded to 10.4.7
- Users running OS X 10.4.7 on PowerPC based Macs might experience difficulties capturing tethered with Canon EOS cameras with USB interfaces. This issue can be solved by installing USB components for Mac OS X 10.4.6. Search Apple's website: (<http://developer.apple.com/hardware/drivers/download/usbdebug.html>) for functional components. Browse Phase One's user-to-user forum (<http://forum.phaseone.com>) for other users' experiences on how to resolve the issue
- With P21, P30 and P45, back might not be able to detect available storage if back was connected upon software's first launch. Solution: Restart software, issue will never occur again unless preferences and cache file are deleted.
- With Lightphase camera gets stuck on Receiving Black Calibration on the very first shot after software was installed. Solution: Either set File format to "RAW Compatible 3.0" in "Preferences" - "Camera Setup" before taking the first shot or Restart software, issue will never occur again unless preferences and cache file are deleted.

RAW file support

RAW files from the following cameras are supported in Capture One PRO:

Phase One:

- P 45+, P 30+, P 21+, P 25+, P 20+
- P 45, P 30, P 25, P 21, P 20, H 25, H 20, H 10, H 101, H 5, LightPhase

Canon:

- 1D Mark III, 1Ds Mark III, 1D Mark II N, 1Ds Mark II, 1D Mark II, 1Ds, 1D
- 5D, 40D, 30D, 20D, 10D, 400D/Rebel XTi, 350D/Rebel XT, 300D/Rebel, D60, D30
- Pro 1, G9, G6, G5, G3, G2

Nikon:

- D3, D2Xs, D2X, D1X, D2Hs, D2H, D1H, D300, D200, D100, D80, D70s, D70, D50,

- D40, D40x
- Fuji:
 - S5 Pro, S3 Pro, S2 Pro
- Pentax:
 - K10D, K100D, *istDL2, *istDL, *istD, *istDS2, *istDS
- Olympus:
 - E-510, E-500, E-410, E-400, E-3, E-1, E-10, E-20, E-330, E-300
 - C-7070, C-8080
- Konica Minolta:
 - Alpha 5 D / Maxxum 5 D / Dynax 5 D
 - Alpha 7 D / Maxxum 7 D / Dynax 7 D
 - A1, A2
- Epson
 - R-D1s, R-D1

 - M8, DIGILUX 3, Digital Module R for R8 and R9 cameras
- Sony
 - α (alpha) DSLR-A100, DSC-R1

Tethered camera support

Capture One PRO has tethered support for the following cameras:

Phase One:

- P 45+, P 30+, P 21+, P 25+, P 20+
- P 45, P 30, P 25, P 21, P 20, H 25, H 20, H 101, H 10, H 5, LightPhase

Canon (not on Mac OS X 10.5 Leopard):

- 1D Mark II N, 1Ds Mark II, 1D Mark II, 1Ds, 1D
- 5D, 20D, 10D, 350D/Rebel XT, 300D/Rebel, D60, D30

Downloading

Before downloading Capture One, make sure your computer meets the following system requirements:

- Macintosh G3 or later
- Mac OS X 10.3.9 or higher (10.4.8 or higher required to run Capture One with Live Preview)
- 512 MB of RAM or more (1 GB or more recommended when used with Phase One P-backs)
- At least 2 GB of free disk space

Phase One provides Capture One in the following languages: English, German, French, Italian, Spanish, Japanese, Chinese (simplified), Chinese (traditional), Swedish, Czech, Dutch, Portuguese and Korean.

To get the latest version of Capture One, visit:

<http://www.phaseone.com/download>

Installing

To install the Capture One software, click the “Install Capture One” application and follow the on-screen instructions. The installer will install the Capture One software and user guide in the Applications folder on your system disk. It will also install a number of ColorSync profiles for use in various lighting conditions.
